                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present invention describes secreted and transmembrane polypeptides and their polynucleotides. The nucleotide sequences are useful as sources of probes, primers, for chromosome mapping, and for generation of antisense sequences. They can also be used to create transgenic animals. The proteins can be used to treat a variety of diseases and disorders, depending on their function. Diseases that may be treated include blood coagulation disorders, cancers and cellular adhesion disorders. They may also be used to raise antibodies. AAZ33891 to AAZ41385 to AAY41774 represent polynucleotide and polypeptide sequence given in the exemplification of the present

                                                                                                                                                                                                                                                                                                                        The present invention describes secreted and transmembrane polypeptides and their polynucleotides. The nucleotide sequences are useful as sources of probes, primers, for chromosome mapping, and for generation of antisense sequences. They can also be used to create transgenic animals. The proteins can be used to treat a variety of diseases and disorders, depending on their function. Diseases that may be treated include blood coagulation disorders, cancers and cellular adhesion disorders. They may also be used to raise antibodies. AZ333891 to AAZ34338, and AAY41685 to AAY41774 represent polynucleotide and polypeptide sequence given in the exemplification of the present
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Wood

                AAC78458 to AAC78599 represent polynucleotide and EST (expressed sequence tag) sequences which encode secreted or transmembrane PRO polypeptides. The PRO polynucleotides and polypeptides have cytostatic activity. The polynucleotides and polypeptides can be used for detecting the presence of PRO polypeptides in samples, for linking bioactive molecules to cells and for modulating biological activities of cells, using the polypeptides for specific targeting. The polypeptide targeting can be used to kill the target cells, e.g. for the treatment of cancers. The polypeptide pairs provide specific targeting of bioactive molecules to cells. AAC78600 to AAC78987 represent PCR primers and probes used in the isolation of the PRO polynucleotide sequences.
                                                                                                                                                                                                                                                                                                                   Goddard

The PRO polynucleotides and polypeptides have cytostatic activity. The polynucleotides and polypeptides can be used for detecting the presence of PRO polypeptides in samples, for linking bloactive molecules to cells and for modulating biological activities of cells, using the polypeptides for specific targeting. The polypeptide targeting can be used to kill the target cells, e.g. for the treatment of cancers. The polypeptide pairs provide specific targeting of bloactive molecules to cells. AAC78600 to AAC78987 represent PCR primers and probes used in

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The specification describes PRO320, PRO338, PRO1031, PRO296, PRO130 and PRO1449 polypeptides. The polypeptides promoter or inhibit angiogenesis and cardiovascularisation in mammals. The polypeptides are used for the treatment and diagnosis of a cardiovascular, endothelial or angiogenic disorder, especially cancer. Disorders that can be diagnosed, treated or prevented the polypeptides of the invention include trauma such as wounds artherosclerosis, and cardiac hypertrophy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Baker KP,

The Ab can be used in compositions and methods for the diagnosis and treatment of neoplastic cell growth and proliferation in mammals, including humans. Genes and polypeptides encoded by them, that are amplified in the genome of a tumour cell, can be identified and are useful targets for the treatment and prevention of certain cancers and may be used to monitor tumour treatment. Compounds that inhibit the expression or activity of the identified polypeptides can be identified and used as antagonists. Benign or mallgnant tumours, inflammatory disorders and immunological disorders can be treated.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  08-MAR-1999

                                                 The present invention describes an isolated antibody (Ab) that binds to CC one of the human proteins (P) designated PRO213, PRO3130, PRO31449, CC PRO237, PRO324, PRO351, PRO3622, PRO615, PRO531, PRO538, PRO3664, PRO618, CC PRO772, PRO703, PRO792 or PRO474. The Ab can be used in compositions and methods for the diagnosis and treatment of neoplastic cell growth CC and methods for the diagnosis and treatment of neoplastic cell growth can be identified and are useful targets for the treatment and prevention of CC certain cancers and may be used to monitor tumour treatment. Compounds CC that inhibit the expression or activity of the identified polypeptides CC can be identified and used as antagonists. Benign or malignant tumours, inflammatory disorders and immunological disorders can be treated. CANC58123 to AAC58224 represent hybridisation probes and PCR primers used in the isolation of the human PRO sequences. AAC5825 to AAC58241 and CC AAB24041 to AAB24056 represent human PRO polynuclectide and protein CC sequences given in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     28-APR-1999

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 and appears to be a secreted protein. There are three alternatively spliced forms of the T125 gene: T125a, T125b and T125c (AAZ37122-Z37135). The sequences of all variants of T125a, T125b and T125c (DAZ37122-Z37135). The sequences of all variants of T125 are used in the invention to create antibodies which selectively bind to T125. The T125 polypeptide is used to modulate a variety of cellular processes. It can be used to produce fusion proteins. The protein may also be used to produce antibodies, and to identify T125 antagonists and agonists. The T125 polynucleotides, polypeptides, homologues and antibodies can be used in screening assays; predictive medicine; and methods of treatment of T125 associated disorders. The T125 polynucleotides can be used to express the protein; to detect T125 mRNA; to detect genetic alterations in the T125 gene; in forensic biology; and as a source of primers and probes.
                                                                                                                                                                                                  hepatotropic;
T125.

CC disorder characterised by their aberrant expression or activity. The CC antibodies are useful as modulating agents in regulating a variety of CC cellular processes e.g. cell proliferation and/or cell differentiation. CC TANGO-139 is useful for treating kidney defects such as kidney failure. CC TANGO-125 is useful in wound healing and for treating cancer. TANGO-110 cis useful for treating neoplasia, TANGO-177 or WDNM-2 is useful for CC treating cancer, are useful to treat pancreatic disorders, such as concentration of the brain. TANGO-125, 110, 175 molecules treat heart disorders, e.g., ischaemic heart disease, cardiovascular disorders, such as ischaemic chart disease. TANGO-139, 125, 110 and 175 molecules are useful to treat crenal (kidney) disorders, such as allowerular disease (e.g., acute and cc thronic glomerularonephritis), TANGO-175 is useful to treat expleen, e.g., the fetal spleen, associated diseases and disorder. TANGO-125 treats prostate disorders, such as inflammatory diseases, Crohn's cdisease and tumours. TANGO-139, 125, 110, 175 or WDNM-2 are useful for creating proliferative disorders, inflammatory diseases, Crohn's cdisease and tumours. TANGO-139, 125, 110, 175 or WDNM-2 are useful for creating proliferative disorders, inflammatory disorders. TANGO-175, or WDNM-2 activity also include apoptotic disorders, relumented arthritis, systemic lupus erythematosus, insulin-dependent diabetes mellitus, clisorders, e.g., immunodeficiency disorders, viral cdisorders, e.g., immunodeficiency disorders, viral cdisorders, e.g., cancers and inflammatory control arthritis, control arthritis, control and proportic disorders and inflammatory control are useful control are useful control are useful control and proportic disorders in human tribates mellitus, control and proportic disorders in human tribates mellitus, control and proportic disorders in human tribates of the invention control and proportic disorders in human tribates of the invention control and the proportic and proportic activity disorders in hum
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Novel TANGO polypeptides and nucleic acid molecules useful as modulating agents in regulating cellular processes and for diagnosing and treating heart, liver, lung, kidney, inflammatory and cellular proliferative disorders -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     29-JUL-1998;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                CC The invention relates to one hundred and twenty two nucleic acids CC encoding PRO polypeptides. The sequences of the 122 PRO polynucleotides CC encode human secreted proteins. The PRO nucleic acids, polypeptides, CC agonists and antagonists are useful for treating a PRO related disorder. CC The PRO polypeptides are useful for diagnosing tumours, especially lung CC cancer, colon cancer, breast tumour, prostate tumour, rectal tumour or CC liver tumour. The PRO polypeptides are useful for stimulating the CC proliferation of, or gene expression, in pericyte cells, for cc proliferation or differentiation of chondrocyte cells, for CC stimulating the release of tumour necrosis factor-alpha from human blood, for stimulating or inhibiting the proliferation of normal human dermal CC stimulating or inhibiting the proliferation for normal human dermal CC applications in molecular biology, including use as hybridisation probes, and in chromosome and gene mapping. AAU83592-AAU83713 represent human PRO CC and in chromosome and gene mapping. AAU83592-AAU83713 represent human PRO CC protein sequences of the invention.

                                                                                                                                                                                                                                                                                    The present invention relates to the isolation of novel human PRO CC polypeptides, and the polynucleotide sequences encoding them. The PRO CC PRO polypeptides are useful for detecting other PRO polypeptides, for CC polypeptides are useful for detecting other PRO polypeptides, for CC linking bioactive molecules to cells expressing PRO polypeptides, CC for modulating biological activities of cells expressing PRO polypeptides, CC polypeptides, and for for identifying agonists or antagonists. The bioactive molecule maybe a toxin, radiolabel or antibody, and causes CC polypeptides or death of the cell. The PRO polypeptides are useful for treating immune disorders, diabetes or hyper- or hypo-insulinaemia, CC cardiac insufficiency, nervous system disorders, kidney disorders, CC cardiac insufficiency, nervous system disorders, and wound healing. CC bone and cartilage disorders or arthritis, tumours, and wound healing. CC polypuctice are useful as CC contisted to probes, in chromosome and gene mapping, in the generation of antisense RNA and DNA, in the preparation of PRO polypeptides, for CC canalysis of individuals with genetic disorders, and in gene therapy. ABUG1071-ABUG1164 represent the human PRO polypeptides of the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             polypeptides, and the polynucleotide sequences encoding them. The PRO polypeptides are secreted and transmembrane proteins. The PRO polypeptides are useful for detecting other PRO polypeptides, for colliking bioactive molecules to cells expressing PRO polypeptides. CC for modulating biological activities of cells expressing PRO polypeptides, for modulating biological activities of cells expressing PRO polypeptides, and for for identifying agonists or antibody, and causes poptosis or death of the cell. The PRO polypeptides are useful for treating immune disorders diabetes or hyper- or hypo-insulinaemia, cardiac insufficiency, nervous system disorders, kidney disorders, cardiac insufficiency across system disorders, and wound healing. CC bone and cartilage disorders or arthritis, tumours, and wound healing. CT hypridisation probes, in chromosome and gene mapping, in the generation of antisense RNA and DNA, in the preparation of PRO polypeptides, for canalysis of individuals with genetic disorders, and in gene therapy. ABU61071-ABU61164 represent the human PRO polypeptides of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Query Match

                                                                                                                                                                                                                                                                                                                                                                                            The present invention describes secreted and transmembrane polypeptides and their polynucleotides. The nucleotide sequences are useful as sources of probes, primers, for chromosome mapping, and for generation of antisense sequences. They can also be used to create transgenic animals. The proteins can be used to treat a variety of diseases and disorders, depending on their function. Diseases that may be treated include blood coagulation disorders, cancers and cellular adhesion disorders. They may also be used to raise antibodies. AAZ33891 to AAZ33338, and AAY41685 to AAY41774 represent polynucleotide and polypeptide sequence given in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          15-MAY-1998

Human neuro-growth factor-like protein Zneul

```
contraception, or to regenerate nerves. LLAINCU LLUCI POLYPEPTIDES (see also AAW88382-97), including specific domains of Zneul and epitope-bearing portions of Zneul, can be used to raise specific antibodies for use e.g. in diagnostic assays.
                                                                                                                                                               EGF-like domains and may be involved in EGF receptor pathways. Zneul is widely expressed in adult tissues, with high expression in heart, placenta, spleen, testis, thyroid, spinal cord and lymph node. Zneul polypeptide can be used as a growth, maintenance, or differentiation factor in the spinal cord, heart, spleen, testis, thyroid and lymph nodes. It may also play a role in breast cancer, glioblastomas, and pituitary adenomas. Zneul may be used to treat Alzheimer's disease, cancer, to repopulate blood cells after chemotherapy, to stimulate myofibroblast proliferation, stimulate or inhibit growth factors made in the placenta, in fertility and

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    This polypeptide comprises human Zneul, a new neuro-growth factor-like protein. Its amino acid sequence was deduced from the nucleotide sequence (see AAV84341) of a cDNA clone isolated from a brain cDNA library. Zneul's closest human homologue is HSMHC3W5A, a gene in the HLA class III region, which is contained in a cosmid which contains Notch 4. Zneul is also homologous to Notch 4 in it
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               .8-JUN-1998;
